SPECIFICATION

Please replace the paragraph starting at Page 19, line 5 with the following:

Once all of the mirrored data has been compressed,[[=]] the control component 150 in one embodiment deletes redundant data based on when the parent file/data was last accessed. This is illustrated at step 1115. In this embodiment the data, which has not been accessed for the longest period of time is deleted first (least current). At this point the control component 150 generates additional ECC for the removed data to maintain the additional redundancy benefits. This is illustrated at step 1120. However, other methods can be used in determining which redundant data to delete.
